MAIN FEATURES

Quarter ended September 1982

The estimated resident population of Australia at 30 September 1982 was 15,225,700. This estimate is based on preliminary results from the 1981 Census. Estimates from July 1976 onwards are expected to be revised shortly in accordance with final 1981 Census data.

The Australian population increased by 51,000 during the September quarter 1982 (61,800 during the September quarter 1981).

There were 61,100 births and 34,100 deaths registered during the quarter. The figures for the September quarter 1981 were 61,000 births and 31,500 deaths.

Net estimated overseas migration gain was 24,100 compared with 32,300 for the September quarter 1981.

EXPLANATORY NOTES

Introduction

This quarterly publication contains estimated resident populations for Australia and the States and Territories from June 1971 to September 1982. It also contains the latest available statistics of births, deaths (including infant deaths), marriages, divorces and overseas as well as interstate migration. In addition, the publication includes age estimates of the resident population for 1971, 1976 and 1981.

2. The Estimated Resident Population is the official population estimates series compiled according to the place of usual residence of the population. Estimates for the period June 1971 to June 1976 are final, whilst figures from July 1976 onwards are preliminary and subject to revision once final 1981 Census results become available.

3. The figures at census dates 1976 and 1981 were arrived at by:

- (a) adjusting the Census Counts (Actual Location basis) to obtain counts on the basis of usual residence (Census Counts, Place of Usual Residence);
- (b) adjusting the Census Counts, Place of Usual Residence, for census under-enumeration; and
- (c) adding to the adjusted Census Counts, Place of Usual Residence, the number of Australian residents estimated to have been temporarily overseas at the time of the census.

4. For census date 1971, this direct method was not used because of the inadequacy of the 1971 PES. The 1971 estimate for Australia was derived by working back from the 1976 Census Count (Actual Location, adjusted for under-enumeration) using the intercensal data on births, deaths and net overseas movement. Information on State of usual residence from the 1971 Census was then used to compile estimates of State populations. These State estimates were adjusted by the difference between the 1971 figure derived from 1976 and the actual 1971 Census Count. To the figures for Australia and the States were added estimates of residents temporarily overseas to obtain the Estimated Resident Population at June 1971.

5. An explanation of the new conceptual basis for population estimates is given in the ABS Information Paper entitled *Population Estimates: An Outline of the New Conceptual Basis of ABS Population Estimates* (3216.0), released on 29 March 1982. An ABS technical paper, *Methods and Procedures in the Compilation of Estimated Resident Population 1981 and in the Construction of the 1971-81 Time Series* (3103.0) will be issued shortly.

Notes and definitions

6. These are provided at the head of each section of tables.

Related publications

7. Detailed annual demographic statistics appeared for many years in the annual publication *Demography* which ceased after the issue for 1971. Since then, annual statistics have been contained in the publications listed below.

Births, Australia (3301.0). The 1981 issue was released on 6 October 1982.

Deaths, Australia (3302.0). The 1981 issue was published on 22 October 1982.

Marriages, Australia (3306.0). The 1981 issue was released on 13 August 1982.

Divorces, Australia (3307.0). The 1981 issue was published on 24 August 1982.

Overseas Arrivals and Departures, Australia (3404.0). The 1981 issue was released on 17 August 1982.

Estimated Resident Population by Sex and Age: States and Territories of Australia, June 1971 to June 1981 (3201.0). The 1981 issue, based on preliminary 1981 Census results and revising annual age distributions from 1971 onwards, was published on 23 August 1982.

8. Other publications of interest are:

Overseas Arrivals and Departures, Australia (3402.0). A quarterly publication showing detailed classifications of movement.

Overseas Arrivals and Departures, Australia (3401.0). A short release of the latest monthly statistics.

Projections of the Population of Australia, 1981 to 2021 (3204.0). Based on preliminary results from the 1981 Census this publication was released on 30 November 1982.

Projections of the Population of the States and Territories of Australia, 1981 to 2021 (3214.0). Based on preliminary results from the 1981 Census this publication is expected to be issued in March/April 1983.

Birth Expectations of Married Women, Australia (3215.0). Results of a sample survey in June 1979 were released in May 1980.

Internal Migration, Australia (3408.0). Results of a sample survey covering the twelve months ended June 1982, released on 3 March 1983.

Australian Life Tables, 1975-1977, prepared by and available from the Australian Government Actuary's Office.

9. Current publications produced by the ABS are listed in the *Catalogue of Publications, Australia* (1101.0). The ABS also issues, on Tuesdays and Fridays, a *Publications Advice* (1105.0) which lists publications to be released in the next few days. The Catalogue and Publications Advice are available from any ABS office.

10. Statistics of overseas arrivals and departures and related data are also published regularly by the Department of Immigration and Ethnic Affairs (see that Department's *Australian Immigration, Consolidated Statistics*) and by the Australian Tourist Commission (on international travel and tourism).

Symbols and other usages

- r figures or series revised since previous issue
- p preliminary—figure or series subject to revision
- n.a. not available
- n.y.a. not yet available
- .. not applicable
- nil or rounded to zero
- break in continuity of series (where drawn across a column between consecutive figures)

11. In this publication population estimates have generally been rounded to the nearest hundred. Neither rounded figures, nor unrounded figures should be assumed to be accurate to the last digit shown.

12. Where figures have been rounded, discrepancies may occur between sums of component items and totals.

Acting Australian Statistician

ESTIMATED RESIDENT POPULATION AND COMPONENTS OF POPULATION CHANGE

Notes and definitions

Method of estimation. The estimates of the population of Australia and the States and Territories at 30 June 1976 and 1981 are the adjusted (for under-enumeration) Census Counts, Place of Usual Residence, to which have been added the number of Australian residents estimated to have been temporarily overseas at the time of the census. The estimates as at 30 June 1971 were derived by the method described in paragraph 4 of the explanatory notes.

Estimates for dates after 30 June 1981 are made by adding to the preliminary Estimated Resident Population for the census date components of natural increase (on a usual residence basis) and net overseas migration gain. Quarterly estimates of the Australian population for the two intercensal periods, 1971-76 and 1976-81, were obtained by adding to the population at the beginning of each period components of natural increase (usual residence basis) and net overseas migration gain. An additional quarterly adjustment (intercensal discrepancy) was made in order to make each intercensal total increase agree with the difference between the estimated resident populations at two census dates. For the States and Territories, both for intercensal and post-censal estimates, account is also taken of estimated interstate movements involving a change of usual residence.

Natural increase. Excess of births over deaths by State of usual residence.

Net estimated overseas migration. Figures are based on net permanent and long-term overseas movements (see notes and definitions, Overseas Migration section) with State or Territory not stated allocated. Short-term movements are excluded. The estimates from July 1976 onwards include an adjustment for the net effect of 'category jumping'. This adjustment is necessary because net permanent and long-term migration figures can be affected by changes in travel intentions, as when an Australian resident departing for a short-term visit overseas (stating that he intends to stay abroad for less than 12 months) in fact stays more than 12 months, thereby changing his travel category from short-term to long-term. Reliable estimates of category jumping were not available for the entire 1971-76 intercensal period, and for this reason it was decided not to apply an adjustment for this to the net overseas migration component. An ABS technical paper, *Estimates of Residents Temporarily Overseas, Visitors in Australia and Category Jumping* (3104.0), will be released shortly.

Net estimated interstate migration. Information about internal migration is available from population censuses and from a sample survey of internal movements which has been conducted at more or less annual intervals since 1970. These sources do not provide the up-to-date quarterly estimates of interstate migration required for regular population estimates. Quarterly estimates are derived from records of interstate changes of addresses

advised to the Department of Social Security in connection with family allowance payments. Family allowance transfer data relate to children only, and interstate migration for all ages is based on the expansion of these family allowance data using ratios of persons aged 15 and over to persons aged 1-14. These ratios, calculated for each interstate flow, are based on results from the latest available census. Data from the *Internal Migration Survey* are used to constrain the *total* interstate moves to those revealed by the Survey.

Because of difficulties in obtaining adequate coverage of all movements from family allowance transfers, estimates of interstate migration are less reliable than those relating to overseas migration and natural increase. Data derived from the ratio expansion method are subject to revision in the light of the more accurate census data.

In this publication, estimates for the 1971-76 intercensal period are consistent with the 1976 Census data on interstate migration, while estimates for July 1976 onwards are based on the ratio expansion method. However, figures for the 1976-81 intercensal period and for the financial year 1981-82 will shortly be revised on the basis of interstate migration data from final 1981 Census results.

Rates of population growth. These express a change during a period as a proportion (per cent) of the population at the beginning of the period. These rates should be distinguished from crude rates (of natural increase, net migration, etc.) which are expressed per 1,000 of mean population.

Average annual rates of population growth are calculated on the compound interest principle and refer to the population at the beginning of the period.

Mean populations. These are calculated for financial and calendar years to the formula:

$$\text{mean population} = \frac{a + 4b + 2c + 4d + e}{12}$$

where 'a' is the population at the end of the quarter immediately preceding the twelve month period, and 'b', 'c', 'd' and 'e' are the populations at the end of each of the four succeeding quarters. Mean populations are used in the calculation of crude rates. The weights used in the formulation of the mean annual populations have been derived using a mathematical technique which involves the fitting of a third degree polynomial function to a series of points. Further explanation of this procedure is available to interested users on request to the ABS.

Population by age/sex. The age/sex data for the 1976 and 1981 census dates are based on the Census Counts, Place of Usual Residence which subsequently were adjusted for under-enumeration and to which were added estimated numbers of Australian residents temporarily overseas on census night.

Revisions. Estimated resident populations from July 1976 onwards contained in this publication are subject to revision in the light of final 1981 Census results. These revisions are expected to be published in the second quarter of 1983.

(a) Differences between the sum of natural increase and net overseas migration and the increase shown are due to the distribution of intercensal discrepancy. A description of the intercensal discrepancy is contained in an ABS technical paper (Catalogue No. 3103.0) to be issued shortly on the methods and procedures of population estimates.
 (b) Estimates of net overseas migration from July 1976 onwards include an adjustment for 'category jumping' (see notes and definitions) and are therefore different from the net permanent and long-term movements presented in tables in the Overseas Migration section. (c) Census date. (d) Average annual rate of population growth.
 (e) Increase and percentage increase shown for quarters are over the population at the same date twelve months earlier.

1982	1.30	1.17	3.23	0.91	2.67	0.67	3.71	1.43	1.66

(a) For the intercensal period 1971-76 the rates shown are based on the estimated net permanent and long-term overseas migration gain. For the 1976-81 period they are based on figures which include an adjustment for category jumping (see notes and definitions). (b) Decrease due to the effect of cyclone 'Tracy' on the Darwin population. (c) Discrepancies between the sum of natural increase and net migration rates and the rates of total growth are due to intercensal adjustment.

BIRTHS, DEATHS, MARRIAGES AND DIVORCES

Notes and definitions

Occurrence and registration. Births and deaths are registered in the State or Territory of occurrence which is not necessarily the State or Territory of usual or last residence of the mother or the deceased. Births and deaths are shown in the quarter or year of registration.

Live births. A live birth is the complete expulsion or extraction from its mother of a product of conception, irrespective of the period of gestation, which after such separation breathes or shows any other evidence of life such as beating of the heart, pulsation of the umbilical cord or definite movement of voluntary muscles.

Crude birth and death rates. The number of live births or deaths per 1,000 mean estimated resident population.

Infant death rate. The number of deaths under one year registered per 1,000 live births registered in the same year.

Marriage. Under the Australian *Marriage Act 1961*, marriages may be celebrated by a minister of religion registered as an authorised celebrant, by a district registrar or by other persons authorised by the Attorney-General. Notice of the intended marriage must be given to the celebrant at least one calendar month but within 3 calendar months before the marriage. A celebrant must transmit an official certificate of the marriage for registration to a district registrar in the State in which the marriage took place.

Divorces. The term divorce, as used in this publication, refers to decrees of dissolution of marriage. Prior to 1980 the term was used to include nullities of marriage and, where application was made before 5 January 1976, judicial separations granted. Details of nullities of marriage are no longer collected from 1980 onwards.

Crude marriage and divorce rate. This is the number of marriages or divorces per 1,000 of the mean estimated resident population. (The usefulness of this rate is limited

because a large and varying proportion of the population used in the denominator is below the minimum age of marriage or is unmarried. Age-specific marriage and divorce rates can be found in the more detailed marriage and divorce publications listed under 'Related publications' at the beginning of this publication).

Total fertility rate. The sum of age-specific fertility rates (live births at each age of mother per 1,000 female population of that age). It represents the number of children a woman would bear during her lifetime if she experienced the rates of the period shown.

Female gross reproduction rate. The sum of female age-specific fertility rates. It represents the average number of daughters born to women all of whom survive to the end of the reproductive period and bear daughters at each age in accordance with the rates prevailing in a year.

Female net reproduction rate. This allows for mortality during the child-bearing period. It represents the average number of daughters born to women who are subject to the fertility rates of a year and the mortality as determined from a life table.

Nuptial births. Live births are identified as nuptial where the father registered was married to the mother at the time of the birth or where the husband died during the pregnancy.

Life expectancy refers to the average number of additional years a person of a given age and sex might expect to live if the age-specific death rates of the given period continued throughout his/her lifetime.

The median age is the age which divides the total numbers in a population into two equal halves.

The median duration of marriage is the duration (in years) which divides the number of marriages dissolved into two halves, one half of these marriages having lasted shorter, the other half longer than the duration shown.

1981	2.8	2.5	2.8	3.1	2.7	2.7	3.2	6.7	2.8

(a) Divorce figures shown refer to dissolutions of marriage only. (b) Many divorces registered in the A.C.T. involve applicants normally resident in areas surrounding the A.C.T. In 1981, only approximately 55 per cent of A.C.T. divorces granted were to applicants normally resident in the A.C.T. The A.C.T. rate is therefore not a statistically accurate reflection of the extent of divorce among A.C.T. residents. (c) Introduction of Family Law Act.

TABLE 18. SELECTED SUMMARY MEASURES OF FERTILITY AND MORTALITY(a)

Year ended 31 December	Fertility				Mortality	
	Total fertility rate	Female gross reproduction rate	Female net reproduction rate	Proportion ex-nuptial %(b)	Life expectancy at birth(c)	
					Males	Females
1947	3.08	1.49	1.42	4.0	66.07	70.63
1954	3.19	1.60	1.50	4.0	67.14	72.75
1961	3.55	1.73	1.67	5.1	67.92	74.18
1966	2.88	1.40	1.36	7.4	67.63	74.15
1971	2.87	1.40	1.36	9.3	67.90	74.60
1976	2.06	1.00	0.98	10.1	69.56	76.56
1977	2.02	0.98	0.96	10.3	69.99	76.94
1978	1.96	0.95	0.93	11.0	70.33	77.33
1979	1.91	0.93	0.91	11.7	70.87	77.88
1980	1.89	0.92	0.90	12.4	71.00	78.08
1981	1.94	0.94	0.92	13.2	71.38	78.42

(a) For crude rates, see previous table. (b) Proportion of total live births. (c) For years 1947 to 1976 based on Official Life Tables calculated by the Australian Government Actuary. The figures for the years 1947 to 1976 are based on the mortality of three years, including the year before and the year after that shown. For all other years based on life tables calculated by the Australian Statistician. Because of the method of calculation these figures are subject to annual fluctuations which may not be indicative of a longer term trend.

TABLE 19. SELECTED SUMMARY MEASURES OF MARRIAGES AND DIVORCES

Year ended 31 December	Marriages				Divorces(a)

(a) There is a break in series due to the introduction of the Family Law Act.

OVERSEAS MIGRATION

Notes and definitions

Category of overseas movement.

Permanent movement consists of movements of persons who, on arrival, state that they intend to settle in Australia (*settlers*), including *assisted settlers* as identified by the Department of Immigration and Ethnic Affairs; and *former settlers* and other Australian residents, who, on departure, state that they do not intend to return to Australia.

Long-term movement consists of movements of visitors arriving and Australian residents departing temporarily with the intention to stay in Australia or abroad for more than twelve months, and the departure of visitors and the return of Australian residents who had stayed in Australia or abroad for more than twelve months.

Short-term movement consists of movements of travellers whose intended or actual period of stay in Australia or abroad is less than twelve months.

Travellers who state exactly twelve months or one year as their actual or intended stay are randomly allocated to long-term or short-term in proportion to the number of returning travellers who report their actual length of stay as up to one month more or one month less than a year. Travellers who fail to state their period of stay are allocated to the short-term category.

Method of estimation and reliability of overseas migration statistics. All arriving and departing overseas travellers are required to complete passenger cards which are the source of the statistics. To reduce processing costs, passenger cards in respect of movement by air with a duration of stay of less than one year are sampled. Estimates for these movements are subject to sampling variability and measures of the sampling error are available. The reliability of the statistics is also affected by errors of reporting and, in particular, by discrepancies arising from the fact that certain information reflects the passengers' intentions at the time the cards are completed, and their intentions are of course subject to change.
